

Meeting Presenters:

Luke Powell, Assistant Director of the City of Laconia Public Works Department. Mr. Powell has been the moving force in obtaining funding for improvements in the Jewett Brook Watershed.

Dean Anson, Chairman of the Laconia Conservation Commission. Mr. Anson, formerly an environmental consultant working in the private sector, is actively involved with many conservation focused, non-profit organizations within the state.

Lisa Morin, Member of the Laconia Conservation Commission and Coordinator for the Belknap County Conservation District. Ms. Morin has served on municipal boards in both Laconia and Gilford.

Shane Csiki, Environmentalist IV with the NH Department of Environmental Services: Geological Survey Unit. Mr. Csiki works with communities to provide technical assistance on the identification and mapping of fluvial erosion hazards.

Jewett Brook Meeting:

How to Manage This Neighborhood Asset

October 24th (Wednesday)

6:30—8 PM

Tardif Park House, 51 Crescent Street, Laconia, NH

This meeting will offer attendees:

- A brief overview of the study performed on Jewett Brook and the resulting management plan.
- An overview of how streams react to natural and manufactured elements in their landscape. This topic will feature the use of a large interactive table model for demonstration.
- Discussion: future funding and publically lead opportunities to improve the health of the brook.
- Reference materials to take home on 'do it yourself' stormwater management and other topics.
- Food and non-alcoholic beverages to enjoy during the meeting.

Many of us are very familiar with the frequently challenging character of Jewett Brook. It starts its life in wooded uplands and passes through the heart of heavily populated residential neighborhoods to finish its journey in an urban section of the Winnepesaukee River. Over the years Jewett Brook has become heavily influenced by the way we have managed the land in its drainage area (a.k.a. watershed). These changes, some good and some bad, have had an accumulative effect in shaping the brook we see today. We all can have a positive effect on shaping the brook for both the near and distant future.

Please consider attending this informative meeting. Thank You.
